Financial Insights & Strategic Focus on Healthcare Assets

September 1, 2025

Key Highlights

- **FY25 Financial Performance:** RAM Essential Services Property Fund (ASX: REP) reported a decent performance in FY25. Total income increased by 4.2% to \$58.03 million, driven by a rise in recoverable outgoings as well as an increase in interest income. Total expenses fell by 9.2% to \$72.74 million, primarily due to lower fund management fees and net unrealised losses on the revaluation of investment properties. Net profit after tax improved to a loss of \$14.71 million in FY25, compared to a loss of \$24.46 million in FY24.
- RAM will continue to make progress in divesting non-core retail assets while advancing a pipeline of over \$300 million in healthcare opportunities, including private day hospitals, mental health facilities, and specialist consulting rooms.
- The investment portfolio, as at FY25, comprised 7 retail shopping centres and 19 medical properties, with a total value of \$671.50 million. This compares to FY24, when the portfolio included 9 retail shopping centres and 22 medical properties valued at \$683.34 million.
- **Guidance:** The FY26 distribution per security (DPS) is forecast to be between 5.00 and 5.20 cents, with approximately 90% expected to be tax-deferred and a projected yield of 8%.

Growth Catalysts

- The company continues to pursue opportunities in various healthcare sub-sectors, with a focus on including day surgeries, which are expected to further drive long-term growth and resilience.
- The company is currently undertaking exclusive due diligence on three additional healthcare and medical sector assets valued at over \$100 million. These assets are expected to deliver attractive yields and contribute immediate earnings accretion.

Key Risks

- The company may face operational risks arising from failures in internal processes, systems, personnel, or external events.
- The company faces competition from other property groups active in Australia. Such competition may result in the loss of tenants to competitors, difficulty in securing new tenants due to an oversupply of commercial space, and reduced ability to achieve maximum rental rates.
- The company faces risks from rising interest rates, which could affect investment activity and reduce profits.

 EMA (50, close, 0)

On the daily chart, the stock is currently holding at a horizontal support level around \$0.610. Additionally, it remains above key exponential moving averages, strengthening this support level. However, if this support is broken, the next key level to watch is at around \$0.585. These technical factors suggest that the stock is at a strong support zone, reinforcing its significance in the current market structure.

Going ahead, the stock may face an initial resistance around \$0.680, and beyond that, it may find strong resistance around \$0.700. On the flip side, if the stock retraces down, it may take initial support at around a price of \$0.610, and if it breaks this level, it could find another support at \$0.585. Hence, considering the aforesaid facts, decent long-term outlook, technical analysis, and associated risk, we give a “Hold” recommendation on the stock at the closing market price of \$7.900 with an upwardly revised target price of \$0.700 and a stop-loss of \$0.530.

We have covered this stock in our Daily Report dated 26 May 2025. [Click here](#) to access the full report.

Stock Name & Code: RAM Essential Services Property Fund (ASX: REP)

Resistance 1	Resistance 2	Support 1	Support 2	Stop Loss
\$0.680	\$0.700	\$0.610	\$0.585	\$0.530

Note: We assume that the position will be taken along with resistance and support level with stop-loss placed. On triggering of the support level, it will be assumed that the Buy position has been built while on triggering of the resistance level (confirming the target price), the Sell position will be assumed to have been built.

Technical Indicators Defined: -

Support: A level at which a downward-trending asset attracts buying interest, preventing the price from falling further.

Resistance: A level at which an upward-trending asset experiences selling pressure, preventing the price from continuing to rise.

Stop-loss: It is a level that prevents further losses caused by adverse changes in stock prices.

Bollinger band: The Bollinger band is a technical indicator that indicates a financial asset is about to enter an overbought or oversold state. There are three lines that make up a Bollinger Band on a price chart. The first line is the simple moving average (SMA), which is usually a 20-period moving average of the asset's price. It takes price data over a specific time frame and averages it out so you can see the big picture. Second is, upper band, which is defined as the band located above the middle band, often two standard deviations higher. Finally, there is the lower band, which is situated a specific number of standard deviations (usually 2) below the middle band and signifies possible overbought situations when prices approach or surpass it. Prices that go close to or go below this zone can be a sign of possible oversold situations.

RSI: The Relative Strength Index (RSI) measures the speed and strength of price fluctuations over a specific time period (typically 14 days). It analyzes the internal strength of a price movement, allowing traders to spot market momentum.

EMA: Exponential Moving Average (EMA) is a type of moving average that gives more weight and importance to the most recent data points. It is used to evaluate the bullish and bearish trends in securities over a specific timeframe.
